

AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph on page 8, beginning at line 23 as follows:

--Fig. 2 shows a second embodiment of a device according to the invention. In the device 20, the second chamber 2 is arranged inside the first chamber 1 with the walls 4. The second chamber 2 has walls 6 in the form of or comprising a membrane, and holds a ball 7 (a plastic ball e.g.) in addition to the liquid. By shaking the entire device 20, the membrane is broken by the ball. Here too, a pressure difference preferably exists between chambers 1 and 2. Of course, the device may also be performed such that the first chamber with the granules is arranged inside the second chamber with the liquid. By the shaking and the pressure difference, a mixing of the liquid and the material will take place in any case, to form a paste. Thereafter, the paste is applied by a squirt, in a cavity that is to be filled by the material.--
